Senior Software Engineer with an experience of 7 years in product driven software development. Experience of 2 years in leading tech and product strategy, decoding complex business requirements into simple technical paths. Seeking to leverage expertise through software and product roles like Senior Software Engineer, SDE-3, SDE-2.

Skills

Ruby on Rails (6 years) • Python (2 years) • MySQL (7 years) • React (6 years) • AWS (7 years)

Education

B.E. Computer Science	BITS Pilani - Hyderabad Campus	2014 - 2018
Minor in Finance	BITS Pilani - Hyderabad Campus	2016 - 2018

Experience

Technical Lead

Apr 2024 - Jun 2026 (Remote)

DirectShifts

Ruby, Ruby on Rails, JavaScript, React, MySQL, AWS

- Built an Invoice Management System to reduce the billing and audit workload by 56%
 - Automated invoice generation on platform for billing different services provided to hospitals
 - Integrated Quickbooks to seamlessly sync data along with conflict resolution tools
- Developed a Credentialing Module that introduced a new revenue stream worth \$1M annually
 - Created an application system to manage license applications, payer enrollment, supervision agreements
 - Simplified document management that reduced the credentialing time from 30 days to 20 days

Software Engineer 2

Apr 2022 - Mar 2024 (Remote)

DirectShifts

Ruby, Ruby on Rails, JavaScript, React, MySQL, AWS

- Built a Payroll System to ensure automated and timely payments for healthcare workers
 - Automated the calculations for payments through timesheets reducing the finance overhead by 32%
 - Integrated Check for payroll processing and managing bank accounts of users with robust tax tracking
- Developed a Scheduling Module to streamline workforce management onboarding five new hospitals
 - Introduced a shift management system that contributed to an increase of revenue by \$4M
 - Created a transition system to easily request, approve, or reject scheduled shifts for different dates
 - Added an availability tracking mechanism to auto-approve clinicians for the matching shifts

Software Engineer

Dec 2020 - Mar 2022 (Remote)

DirectShifts

Ruby, Ruby on Rails, JavaScript, React, MySQL, AWS

- Built a Timesheet Management Software that eliminated the manual system to track work logs
 - Created a system to log shifts & visits conducted by doctors and track their reimbursements & bonuses
 - Automated the timesheet creation by introducing QR scans at the hospitals eliminating late submissions
 - Built a leave tracking system to calculate employee leaves based on state laws and prevent over-utilization
- Optimized the Recruitment System that increased the job applications by 150%
 - Implemented a simplified profile setup to pre-fill a user's healthcare profile by parsing their resume
 - Reduced the processing time to identify matching jobs for an applicant from 30 mins to 15 secs

Software Development Engineer

Jun 2018 - Jun 2019 (Bangalore)

NestAway

Python, AWS Lambda, MySQL, BigQuery, G-Cloud

- Developed a Tenant Scoring System to assign a credit score to users based on their payment behaviors
 - Created a scoring service to consume payment events and update the credit score considering delays
 - Analysed the pattern of late payments based on factors like city and age using machine learning algorithms
- Housing Inventory Integration
 - Implemented a real-time system for on-demand syncing of house inventory with third-party partners
 - Automated the posting and deletion of houses using AWS lambda improving their hit rate by 27%

Software Development Intern

Jul 2017 - Dec 2017 (Bangalore)

Dell EMC

Python, C++, MongoDB, Redis

- Developed a Fault Detection System to improve the code coverage and detect blind spots in the source code
 - Created a system to store the historical coverage information and compare it during developments
